ZHANG, N. 844
ZNATI, T. 854

Annual Subject Index: 1996

Ada 95
  programming replicated systems, distributed systems 361

Algorithm
  attribute graphs, relational databases, functional dependencies 124
  block sorting, compression 731
  Boyer–Moore, string-matching algorithm, on-line version 413
  control, analysis of replicated data 767
  control, multimedia servers 757
  Cyclic Towers of Hanoi, iteration 353
  finite state automata, invertibility, sequence overlap 325
  global memory management, client–server DBMS 374
  node to node routing, hypercubes 14
  numerical, automated application of program transformations 145
  on-line randomized competitive, searches 427
  optimal, node-to-node fault tolerant routing in hypercubes 626
  parallel associative memory, extreme-value searches 241
  parallel, multiple broadcasting, *k*-dimensional meshes 140
  reverse protocol verification 511
Architecture
  Multipath, Prolog programs 780
  multiprocessor, compile-time scheduling heuristic 663
  query formualtion, information retrieval 255
Attribute graphs
  relational databases, functional dependencies 124
Automation
  automated reasoning, Bayesian belief networks 97
  automated systems, detecting suspected plagiarism 741

Bandwidth
  interconnection networks, hypergraphs 232
Bayesian
  belief networks, automated reasoning 97
  discretizer, real-valued attributes 688
Block sorting
  Burrows–Wheeler Transform, text compression 731
Bus-based systems
  performance analysis, bandwidth 346

Category theory
  conceptual data modelling, semantics 215
Client–server
  DBMS, memory management algorithm 374
  evaluation of performability parameters 647
Compilation
  compilers, Occam, transputer code 52
Composition
  parallel, fractal image, quadtree recomposition 1
  text, Burrows–Wheeler Transform 731
  prioritizing, theory of 701
Computation
  nested loops, scheduling 439
Concurrent logic languages
  distributed systems, coordination model 876
Control policies
  threshold-based, multimedia servers 757
Copyright,
  Australian recommendations on computer software protection 566
Cyclic Towers of Hanoi
  interesting properties, algorithm 353

Data modelling
  conceptual, category theory 215
  language, semantics 275
Data
  structures, numerical algorithm, automated application of program transformations 145
  transfers, minimizing, distributed query processing 675
Databases
  client–server DBMS, memory management algorithm 374
Design
  array processors, division-free linear system solving 713
Dictionary machines
  semi-X tree-based, VLSI algorithms 45
Discretizer
  Bayesian, real-valued attributes 688
Distributed programming
  development, new coordination model, programming notations 876
Distributed systems
  Distributed Systems Annex, Ada 95 361
  parameterized network topologies 417

ELLA
  formal semantics, process algebraic foundation 303

Family
  minimal perfect hash functions 547
Fault tolerance
  performability parameters, client–server environments 647
  Gaussian Cubes, parameterized network topologies 417
  programming replicated systems in Ada 95 361
  routing, node to node, hypercubes 14
Feature recognition
  roads, cognitive approach 751
Fibonacci cube
  Hamiltonian graphs, interconnection networks 331
Finite state automata
  algorithms, invertibility, sequence overlap 325

Flowers Report
provision of digital computers to British universities 630
Foresight
technology programme 561
Functional dependency
relational databases 114
relational databases, attribute graphs 124

Gaussian cubes
parameterized network topologies, distributed systems 417
gotos
re-engineering loops, imperative programs 184
removing, termination problems 203

Hamiltonian graphs
Fibonacci cube, interconnection networks 331
Hash functions
family of minimal perfect 547
Heuristic
compile-time scheduling, multiprocessor architectures 663
Hypercubes
Fibonacci cube, Hamiltonian graphs 331
node to node routing 14
node-to-node fault-tolerant routing 626
Hypergraphs
high-performance parallel systems, interconnection networks 232
Hypermedia
distributed, collaborative learning in universities 471
Hypertext
automated support, software maintenance 577

Images
retrieval, logical model 173
Imperative programs
re-engineering loops 184
termination problems, removing gotos 203
Information
retrieval, query formualtion, architecture 255
retrieval, relational databases, functional dependency 114
sharing, cooperative, shared object service 455
storage, relational databases, functional dependency 114
visualization, LEADS, legibility techniques 819
Interconnection networks
bus-based systems, performance analysis 346
Interpolation
grid-based terrain modelling 837
Invertibility
sequence overlap, finite state automata 325

Language
data modelling, semantics 275

Lattices
concept sublattices, sub-knowledge bases 868
LEADS
information visualization, legibility techniques 819
Learning
in universities, using distributed hypermedia 471
Lisp
object-oriented technology, OPLA 20
Logbooks
object-oriented modelling 793
Logic
channels, coordination model, distributed systems 876
first order, image retrieval 173
programming, object-oriented technology 20
reified temporal, non-temporal assertions 800
Loops
nested, optimal scheduling of computations 439
re-engineering, gotos 184

Memory
machine, scalable shared queue 483
management, global algorithm, client–server DBMS 374
module, performance analysis, bus-based systems 346
parallel associative algorithm, extreme-value searches 241
shared, boundary-restricted coherence protocol 496
Meshes
k-dimensional, multiple broadcasting 140
Modelling
logical image, retrieval 173
object-oriented, logbooks 793
surface modelling, novel interpolation method, grid-based terrains 837
Multimedia
servers, threshold-based admission control policies 757
Multiple broadcasting
k-dimensional meshes 140

Navigation
urban planning, legibility techniques 819
Neighbour greeting
network-layer reachability, ARP, ES-IS 854
Networks
Belief networks, Bayesian, automated reasoning 97
interconnection, bandwidth, hypergraphs 232
network-layer reachability, neighbour greeting 854

Object-oriented
graph, recognition of geometric features 808
modelling, logbooks 793
technology, OPLA, common Lisp 20
Objects
non-constant size, red–blue intersection 541
OCCAM
compilation techniques, transputer code 52

OPLA
object-oriented technology, common Lisp 20

Parallel applications
large-scale, formal framework 386
Parallel systems
Fibonacci cube, interconnection networks 331
performance modelling, bandwidth, hypergraphs 232
partition, testing strategies, constraints 619
Performance
analysis, bus-based systems, bandwidth 346
modelling, parallel systems, interconnection networks, hypergraphs 232
Petri Nets
performability parameter, client–server environments 647
Plagiarism
automated systems, detection 741
Predicates
reified temporal logic 800
Procedure calls
prototyping 525
Process algebra
reasoning, ELLA 303
Processor design
division-free linear system solving 713
Programs
analysis, formal transformation 598
transformation, automated application, numerical algorithm 145
transfomation, Cyclic Towers of Hanoi, algorithm 353
Prolog
Multipath architecture for programs 780
Protocol
ARP, ES-IS, neighbour greeting 854
coherence, boundary-restricted, distributed shared memory 496
reverse, concept, algorithm and application 511
Prototyping
remote procedure calls, URPC 525

Quadtree recomposition
parallel fractal image compression 1
Query
formualtion, information retrieval, architecture 255
processing, minimizing data transfers 675
Queue
scalable shared, distributed memory machine 483

Ranking
relative unranking, binary trees 36
Reasoning
hierachical, window inference, transformations 291
Recognition
geometric features, object-oriented graph 808
Relational databases
attribute graphs, functional dependencies 124
functional dependency 114
Replication
programming replicated systems in Ada 95 361
replicated data, analysis, repair dependency 767
routing, multi-label linear interval 133
optimal algorithms for node-to-node fault tolerant routing 626

Scheduling
computation of nested loops, 439
Search
extreme-value, parallel associative memory algorithm 241
on-line randomized competitive algorithm 427
Security
electronic data interchange, non-repudiation of receipt 844
Self-reference
expressions, formal systems 408
Semantics
category theory, conceptual data modelling 215
data modelling language 275
formal, process algebraic foundation 303
reified temporal logic 800
Sequence overlap
invertibility, finite stat automata 325
Servers
multimedia, threshold-based admission control policies 757
Shared object service
developing, cooperative information sharing 455
Software
engineering, parallel applications, formal framework 386
maintenance, automated hypertext support 577
protection, Australian recommendations 566
Sub-knowledge bases
concept sublattices 868
Syntax
reified temporal logic 800
Systems
formal systems, self-referencing expressions 408
system solving, division-free, linear 713

Temporal
non-temporal, reified temporal logic 800
Termination
removing gotos 203
Terrain modelling
grid-based, novel interpolation method 837
Threshold voting
parallel 692
Toolkit
URPC, prototyping remote procedure calls 525
Topography
road recognition, cognitive approach, novel feature indicators 751

Transformation
formal, program analysis 598
transform, Burrows–Wheeler, block sorting, text compression 731
window inference, hierarchical reasoning 291
Trees
binary, relative unranking 36
semi-X tree-based, dictionary machines, VLSI algorithms 45
Universities
British, provision of digital computers 630
Urban planning
information visualization, legibility techniques 819
Voting
parallel threshold 692
Window inference
transformations, hierarchical reasoning 291
